| Type of Comment | Objection |
| Comments | I strongly object to the siting of this incinerator due to the poor transport infrastructure that currently exists in the area surrounding the proposed development, namely the A27, A259, Ford Lane and Yapton Lane. As a regular user of this route, the road system already suffers from heavy congestion and would clearly not cope with the addition of the additional construction traffic, let alone the unbelievable level of large refuse lorries should the incinerator be completed. Additionally, I object to a facility that burns waste with a chimney 50m in height that would not only dominate the local views but, with the prevailing winds from the South West, would spread harmful particulate over the newly built, densely populated, areas of Littlehampton and Angmering. Of particular concern, would be high pressure summer days when the winds would be from the East which would then spread the pollution towards Chichester, blighting the areas of Yapton and Barnham during a time when the population will be outside enjoying the fine weather and what they believe to be, fresh air. Frankly, I can't imagine a less suitable site for such a facility. |
