Objection

The application contains many mistruths and inaccuracies. In particular in regards to impact this will have on the environment and the wildlife that currently resides in the quarry. Any changes to the area

created newts, sand martins and peregrine falcons. I have seen the birds myself in and around the

quarry. Any landfill going into the quarry will impact the local waterways as it is pumped into the stream which runs through Ashington. Furthermore the local roads can not handle the amount of lorries as well the diagram in the application showing that two trucks cannot pass by one another without crashing. These will also increase the air pollution to the local area. Also is there actually a need for this large amount landfill from the local area? The application claims that all material will be from the local area, however where will it all come from? What about the recently approved inert landfill application at Sandgate Quarry less than 2km away? Very quickly they will run out of local material and the landfill will be brought from further afield.

as laid out in the plan will be detrimental to the wildlife which live there currently including rare great

In conclusion the application should REJECTED as this is of no benefit to the local residents, the wildlife and the environment. The quarry should be restored as originally planned.
