This submission is addition to my objection submitted 05/09/21 as the result of the applicant's recent December notification of 166 pages of additional information.

The response does not address my previous concerns as a user of the locality, particularly as a walker and cyclist. The only reference that I can see regarding pedestrian and cyclists, relates to proposed exploratory onsite infrastructure facilities, and an electric vehicle charging point, which do nothing to allay fears to safety of road users along the A283 including the anticipated entrances to the site. I urge the applicants to experience walking or cycling along the road amongst the traffic, at these entrances, where there is no clear footpath. Haulage and plant vehicles using this project can only be an additional noise and pollution hazard, as well as a threat to safety.

The proposed vehicle wheel washing plant machinery is to be diesel powered, which means additional air pollution, with no operative supervising, or indication where the waste water will be disposed of. What a magnet for children nearby.

I confirm my previous view and object to this application WSCC/028/21.
