The dust and noise created by this operation is harmful to the environment. The dust from crushed concrete contains silica which can cause respiratory illnesses is plain to see on any surface with in at least a mile of the proposal. The noise from the machinery and lorries especially those with reversing warning devices is constant 6 days a week. The people this affects are the local residents and not those from far afield that are the only supporters of the proposal. These people also look like customers of Recycle Southern who may have been encouraged to support without consideration for those who are genuinely effected.
