Objection

I register my objection to this application for landfill and processing / recycling plant. This will a hugely toxic & detrimental affect on our precious wildlife & protected woodland. The levels of enhanced pollution, noise, smell and grime due to the 500+ lorry cargo and movements per day on an already heavily congested and highly polluted Storrington Road - we can barely get in and out of our estate as it is. Not to mention the toxic impact from waste leaching and polluting our local streams and aquifer providing our drinking water through to the visual impact. We chose to live on the edge of the Southdown's National Park for it's tranquillity, wildlife and beauty that truly needs to be preserved now, and for future generations. I appreciate a corporate business is keen to progress this application as it would make them money, but what benefit is this to the health and wellbeing of the local community. Health, safety and wellbeing of local wildlife and residents must be protected over profit margins. Supporting this application would be totally horrific in every sense and would definitely hit national headlines! Thank you for your help and support.
