Mlashington  
RH. 20 4TD.

Dear Sir/Madam Re Application No. W SCC/028/21

As residents of Mlashington for some 50 years we seemed to have remained static on the subject of closing the pit for the extraction of sand and the restoration & re-building of the area, very little has been done of anything at all.

Dudman Ltd & the Milton Estate wish to continue removing sand. Of course they do, they make money and that's what Dudman & the Milton Estate care about, not that they pollute the surrounding atmosphere. They now want to dump more waste "enact" by the fact it is waste which nobody has a use for and could be coming from miles away in England or perhaps other countries who knows? I would like to be assured that there will be strict controls and checks <sup>that</sup> the loads contain no pollutants whatever, & that the checking is done by an independent company unconnected to Dudman or Milton Estates. I am saying this because directly underneath the pit lies a very valuable asset. an aquifer that is very large & supplies water to parts of Sussex & Hampshire.

P.T.O.

if this is breached in any way and  
pollutants get in, then calamity big-time  
for all not just the long suffering  
inhabitants of Meslington

Please do not allow any of their plans  
other than the restoration of the pit.

Many thanks
