Chris,

I have reviewed my comments in the light of SWT's response to the application.

Should the MPA be minded to approve the current application, I agree that the two conditions 9 & 16 imposed on the 2014 application should be applied to this new application with one amendment. I recommend that the text applied to condition 16 within the 2014 decision notice.

Bat Monitoring

Bat activity surveys will be undertaken within 7 days of this permissions implementation throughout the life-time of this permitted operation. All identified adverse impacts on bats shall be reported to the relevant site operators and the LPA and ameliorated immediately. A final report shall be produced and submitted to the County Planning Authority upon operations relevant to this permission have ceased.

Reason: to assess and ameliorate the impact of the development on bat activity.
