Comment for planning application WSCC/036/20

Application WSCC/036/20 number	
Name Mrs Deborah Carter	
Address TORONTO CLOSE, 5,	TORONTO CLOSE, WORTHING, BN13 2TD
Type of Objection Comment	
landscape in the surrous proposed as the preva Goring, Worthing are and have relatives in area that could be affe would also have a det this site should be allo we are trying as a cou and wildlife that could as pollution to the wa Chichester Cathedral to an area of natural of the proposed construct facility for treatment of	structure is unreasonable and this would cause a significant impact on the bunding area I strongly object to this incinerator being built at the height ailing wind is usually West, South West so Angmering, Littlehampton, Durrington, directly in the line of the pollution fallout from this structure. I live in Durrington Goring, some with severe breathing difficulties who could be affected by this. The ected by the pollution produced from this incinerator is vast and I believe this rimental effect on the wildlife in those areas. I do not feel the development of owed at such a great height or size and would question why it is required when intry to reduce the carbon footprint, not add to it. It is not only people's health suffer from this proposal being approved, there may be wider implications such ter and crops. The proposed height of the waste chimney would be higher than and be a most unpleasant and unattractive site, which would be positioned close butstanding beauty and a national park. These are the reasons why I object to ction and operation of an energy recovery facility and a waste sorting and transfer of municipal, commercial and industrial wastes, including ancillary buildings, ardstanding and landscape works.
