Objection

I strongly object to the construction of an energy recovery facility and a waste sorting and transfer facility in Ford. My 1st reason is ecological: there is no guarantee that the emissions will not spread all over the Ford, Climping, Walberton, Fontwell, Barnham, Eastergate and Westergate areas. There would definitely be a health risk for the residents in having such an incinerator near by. Added to the incinerator emissions would be the pollution from a vast number of trucks and vans arriving on site and departing from it. My 2nd reason is: The traffic to and from the site would be horrendous, with many hundred of vehicles per day on unsuitable country roads. The vehicles would come not only from our district but a long way outside of it in West Sussex which would add to the traffic. My 3rd reason is: the size of the incinerator and chimneys would be an eyesore on the landscape and ruin our lovely coastline. How can you possibly have such a building whose chimney would be higher than the steeple of Chichester cathedral that you can see from miles and miles around. In summary, I very strongly object to this project which does not consider the health and well being of the local residents.
