Comment for planning application WSCC/036/20

Application number	WSCC/036/20
Name	Brian John Dawson Rain
Address	4 Mount Lane, Chichester, West Sussex
Type of Comment	Objection
Comments	The need for an energy recovery centre in Sussex is clearly an essential requirement but it is vital that it is more centrally located in order to reduce the traffic generated by moving refuse from outlying towns and villages. The pollution generated by these vehcles flies in the face of the governments attempt to improve the environment. Whilst it is not clear what area this facility will serve to locate it in such a southerly location defies logic. It also destroys the visual aspects of the coastal plain which is visited by many holidaymakers wgo do not want to see such a dominant and ugly building a chimney. Gradually the country has removed many of the chimneys associated with our industrial past, so to erect such an ugly building which is totally out of character and so close to a new housing estate of 1500 dwellings is close to insanity and brings into sharp relief the competence of the members of the West sussex County Council who have not covered themselves in glory recently. The Application should be refused.
