Objection

I object to the proposal as the roads at the present do not have the capacity to take the extra HGV 's that will be using the local roads. Since the opening of the new RR facility in Bognor I have noticed far more HGV's using the B2132 from Comet Corner and North End lane as a cut through to the A27 rather than the A259. and A29. The traffic to the incinerator will make this even worse until a link to the new proposed A27 is made. I am also concerned about the possibility of local pollution caused by incinerating waste. I do understand that the waste will be burnt in a controlled manner but the printing inks and dyes containing rare earth metals used on the waste as well as the catalysts such as antimony used in the polymerisation process used to manufacture products such as PET bottles and fleeces will be released into the environment and pollute our new national park and local area. this pollution will be far worse on wet days as it will concentrate toxic chemicals in our local area. I do understand rubbish and land fill is a major problem but for all but reuse, and recycle and making rubbish less toxic is far more important than burning rubbish that cannot be used leaving a toxic ash
