Type of Comment	Objection
Comments	1. Lack of information on the air quality for the new proposed stack height. It appears that no studies have been conducted on the the impact of the emissions from the stack on the local area . The scope of the original Grundon EIA scoping report appears to be out of date 2. There appears to be no reports on the impact of the extra traffic generated by this proposal available for comment. As it is the the local roads are incapable of carrying any extra traffic re condition of roads, congestion , environmental damage & safety measures to cope with heavy vehicles.
