WSSC/036/20 – Ford Circular Technology Park

O.C.O Technology wholly support the proposed development of an Energy Recovery Facility and Waste Sorting and Transfer Facility at Ford Circular Technology Park.

O.C.O Technology is one of the world's biggest commercial carbon capture and utilisation businesses, with three operational facilities in the UK and three active development projects overseas. Our Accelerated Carbonation Technology (ACT) process uses waste carbon dioxide gas as a resource to transform Air Pollution Control (APC) residues into the world's first truly carbon-negative aggregate.

Our existing relationship with the Applicants was a key factor in helping their Lakeside Energy from Waste Facility become the UK's first zero waste to landfill EfW in 2017. These arrangements will be carried through to Ford Energy Recovery Facility to ensure that the zero waste to landfill industry benchmark is maintained well into the future.

The proposed development will play an important role in diverting significant volumes of waste arising locally from being sent to landfill and in turn will help the UK achieve its renewable energy targets and to decarbonise energy generation.

Yours sincerely,

Stephen Roscoe
