Type of Comment Comment I am objecting for the following reasons: - pollution which is produced by incinerators affects air, earth and water. Among many pollutants are nitrogen oxides, sulfur dioxide, lead, mercury, dioxins and furans which all are known for having serious public effects. Studies done on incinerators (source: 'Mortality and morbidity among people living close to incinerators: a cohort study based on dispersion modeling for exposure assessment') showed they the exposure to incinerators in public was associated with cancer mortality, especially women, reproductive system deffects, miscarriages and stillbirths, cardiac and neurological problems road traffic. Taking into account the permission for another 1500 houses to be built on Ford Airfield, it means that another 1500 cars will be added to the nearby roads, because nowadays nearly every household has a one car or two. Now add up lorries, workers going to and from incinerator, it means around 2000 cars more per day on A259, Church Lane and Yapton Road. These is an enormous addition to these small roads, and when you take into account lorries rushing to a site to get rid of rubbish because they have their limits, it all creates a serious road hazards which can lead to serious road accidents. A259 is the only way to come to Ford and Bognor Regis and if anything happens and road is closed you have no choice as to reach Ford via Arundel, Ford Road which is especially narrow next to the roundabout/ residential cars parked there and definitely no lorries could go throught. Other way would be to go next to Yapton Primary school which can put children's lives in danger and create an enormous traffic and disturbance on collecting children from school. It's obvious that location is not suitable for incinerator, being as Chichester or even Arundel cathedral and will be visible fuming for miles. I think it will deter tourists coming to Arundel businesses incinerator sare found to be far away from being climate friendly. Plasti is more toxic and stil	Name	Tatiana Danilova

Other way would be to go next to Yapton Primary school which can put children's lives in danger and create an enormous traffic and disturbance on collecting children from school. It's obvious that location is not suitable for incinerator, because there is simply no suitable road infrastructure in place landscape view. Incinerator chimney will be as high as Chichester or even Arundel cathedral and will be visible fuming for miles. I think it will deter tourists coming to Arundel and other local areas thus taking away income they bring to local area when visiting, - by studies done house prices next to an		Objection
