Objection

I would like my objection noted for this application to build such a huge structure in Ford. The reasons for my objection are as flows 1. The height and size will be a complete eyesore to a beautiful part of West Sussex and spoil the look of the lovely countryside. 2 The traffic on the surrounding roads are extremely busy at most times and to cope with the huge vehicles used to transport waste will cause congestion the roads more than would be acceptable in such a rural location. 3 The pollution caused by the additional traffic and the operation at the site will have an adverse affect on the local residents and the wildlife. 4 In the current climate the area is struggling to encourage tourists to visit the area and if the future means more staycations due covid, the sight of a huge waste plant will not be something people will be drawn to. 5 We have some beautiful scenery and views in West Sussex and this proposed structure will be seen above anything else and destroy the views. 6 surely a facility like this should be build in a more industrial area where there is less residential areas and countryside. We have better transport routes these days and waste could be transported further afield than congesting and already choked route to the south.
