## Comment for planning application WSCC/036/20

Address 4, Sargent Close Littlehampton  Objection  Objection  Comment	Application number	WSCC/036/20
Type of Comment Comment Comment Comment As a resident of one of the new Residential Developments in Littlehampton, just two miles downwind from the proposed 85 meter tall smoke-stack, I am appalled that there has not been any sort of consultation with Littlehampton/Wick Residents. ( especially those in Kingley Gate which are nearest, and those in Hampton Park and other affected areas of Wick ). With many more homes still projected in Ford itself and indeed the Hampton Park Development surely the construction of a facility that will be emitting potentially harmful exhaust-gases should not be allowed. One assumes that the facility will be outfitted with scrubbers reducing the NOx and SOx in the exhausts and that there will not be any emission of Dioxines - however will there be an independant regulatory body be supervising this and will there be compensations paid out if, through system failures, the population will be exposed to harmful gases ?. Furthermore, the presence of a 85-meter tall smoke-stack and a huge industrial building so close to the South Downs ( an area of Outstanding Natural Beauty ) and so close to the historic village of Arundel, will be detrimental to the public enjoyment of these beauty-spots. In an age where humanity is rightly turning away from fossil fuels in favour of more sustainable methods of generating energy there should be no place for burning waste which will somehow add to the greenhouse gases in the atmosphere. The solution to the problem of the ever increasing amount of waste should be sought at the source ( i.e. reduction of single-use plastics, reduction of wrapping materials, recycling of raw materials in the waste-stream, use of environmentally friendly processes to break-down waste into re-usable materials and ultimately holding manufacturers accountable for the	Name	David Brinkhaus
