To those it may concern,

I have read through the very minimal details of Ford Energy Recovery's Planning Application which does not describe the final dimensions of any such new buildings. There is suggestion that as part of this development they wish to build a 280 feet (85 metres) tall chimney.

I am in bewilderment that in this day and age, when we are trying to reduce emissions into the atmosphere in order to reduce the onset of global warming, that anyone should be even thinking of a method of adding to the emissions.

We are living through some of the warmest periods in the World's history creating the melting of the ice flows in the Arctic and Antarctic which is likely to lead to uncontrollable flooding around the world and major changes to world-wide climate. All this has been due in a large part by emissions produced by such a blinkered approach.

I fervently object to this planning application by Ford Energy Recovery of an 85 metre chimney..

A young Swedish schoolgirl, Greta Grunberg, has been travelling the world pointing out, correctly, that such emissions have helped create global warming which would become a major issue for future generations.

We cannot be party to something which will endanger the lives of our children and their children.

What on earth are those putting forward these planning applications thinking about?

In her words **"How dare you"**.

Is it possible for you to put my mind (and millions of others) at ease by confirming that such a dangerous construction is not to be built?

Yours,

George v. Grundy
