## Comment for planning application WSCC/036/20

Application number	WSCC/036/20
Name	Linda Smith
Address	14 Arundel Way, Bognor Regis, West Sussex, PO226jh
Type of Comment	Objection
Comments	I strongly object to this application. The negative impact of this plant on the surrounding area would be enormous in so many ways. For a start the surrounding road structure is not sustainable to accommodate the additional heavier, larger lorries which will be used when the plant is built. We are already over loaded. Also, and the main reason for the objection, the impact on the environment and health of the surrounding community which would be put at risk. Burning waste produces toxic emissions and contributes to climate change. The government's drive to reduce and bring all greenhouse gas emissions to net zero by 2050 would be much diminished by any new sites such as this. I also believe the site is unnecessary I read that in the EU higher targets for organics management, recycling, waste reduction and waste diversion have caused incineration overcapacity, meaning there are more incinerators than waste available for burning. We should be investing in separate collection, recycling and waste prevention policies, and not getting locked into long-term contracts with oversized waste burning facilities which would be to the detriment of the community and the planet.
