Objection

I am a local resident and enjoy the south coast, south downs and local landscape. This proposed development will fundamentally and permanently alter the local landscape and skyline in a very negative way. Put into perspective, this development would be significantly taller than Chichester Cathedral, them main building would be 2.5 times the height tallest local trees and the chimney over 4 times the height. This means that there is no way of screening or mitigating the effect, it will quite simply be a huge blot on the landscape. There is a proposed four fold increase in size and volume though put over the exiting consent which will mean 4 times more lorries and traffic and waste being hauled into the area from greater distances. It is also to be noted that the application is now for a waste incinerator and not a gasification plant. This completely undermines the environmental credibility or the scheme and is massive environmental risk to local homes and businesses. It is not acceptable on any level
