Dear Sir/Madam,

- I support the application for the Grundon, waste to energy transfer plant, at Ford.
- I believe that the Grundon plant will be a great asset to the local community.
- The plant will offer a carbon neutral answer to the problem of waste disposal.
- The incinerated waste will supply power to the local community and all side products are reusable (road making materials etc.)
- Only steam is produced from the chimney, which will become a local landmark.
- If there are any doubts, please look at what Grundon has showcased at Heathrow.
- I belong to a small local charity called Cancer United. Grundon is an ethical company and have provided invaluable support since they came to the site in 2013. They have made available a storage area for our donations, enabling us to raise money from market stalls and street fayres etc. They have sponsored many of our activities, including our choirs and walking football teams.

I urge West Sussex Council to grant permission for Grundons facility at Ford.

The community will benefit from the improved management of waste, (plus of course some extra employment) and our charity, plus others, can continue with the good relationship that Grundons offer.

Yours Truly,  
Geoff Hamilton
