Dear Sir/Madam,

I write in support of the above planning application by Grundon Waste Management for a waste to energy transfer plant at Ford.

Waste management services play a valuable role for the community and incineration can be a carbon neutral option given the new technology Grundon are proposing, and have already showcased at their Lakeside plant near Heathrow.

I support the application as I recognize Grundon Waste Management are an ethical and responsible business and have done a lot in supporting the local community.

I am an active member of Cancer United. A local charity that Grundon supports with sponsorship and making available storage, at Ford, for our donations that we sell to raise funds. Mr Norman Grundon also has taken the time to deliver a virtual talk during lockdown, to members who have been shielding. He entertained with stories of how Grundon came to be and by explaining the technology behind the Ford application.

The chimney, that will only emit steam, will be considered by some to be a landmark, not an eyesore!

Yours truly

Helen Hamilton
