Comn	nent for planning application WSCC/045/20
Application number	WSCC/045/20
Name	Steve Brodrick
Address	36 Chisbury Close, Bracknell
Type of Comment	Objection
Comments	I would like to express my objection to this development on the following grounds: A similar request has previously been denied by WSCC and there is no reason why the decision should be any different now. This development is still "not in the public interest" and still "not appropriate to the area". The government has committed to reduce carbon emissions to net zero by 2050 and many recognised and respected climate scientists and environmental organisations have even said that this is too late. Extraction of fossil fuels, in the present situation, is not only morally wrong, but negligent in regard to the safety of current and future citizens of the United Kingdom. Allowing this development to go ahead would set a precedent for the Weald, making it difficult to argue against extensions to this site and the

establishment of new drilling sites, resulting in further degradation of an area of outstanding natural beauty. This development would represent a risk to groundwater and the nearby Ardingly reservoir, it would present an air pollution risk and would introduce harmful chemicals into the ground. In addition, it would result in additional HGV traffic on a road the passes a school and numerous residences, and is
