Comment for planning application WSCC/045/20

Application number	WSCC/045/20
Name	Grace Tobin
Address	38 Dunluce Avenue
Type of Comment	Objection
a 5 1 0 1 1 1 0 0 0 1 1 0 0 0 1 1 0 0 0 0	Did you watch David Attenborough's "Extinction: The Facts? If you did I hope you understand that we are on the brink of a 6th mass extinction. And during a mass extinction very few living organisms can survive, not even you and you family. If climate change continues to get worse we will see more forest fires, famine, extreme weather, war and maybe the collapse of civilisation. The primary cause of the 6th mass extinction is burning fossil fuels and you plan to invest in more. Did you have an attachment to a certain animal growing up? Do you want to live in a world were it can no longer exist? Or do the younger members of your family? Investing in fossil once made people incredibly wealthy but it no longer makes any economic sense. We are heading for a third industrial revolution were renewable energy sources will overtake fossil fuels, which are depleting more and more. As well as depleting because of the nature of the market, more and more countries are investing in renewables to combat climate change. Scientists and economists have agreed that fossil fuels have "matured". It is now cheaper to buy and set up one wind farm than it is to continue running a power plant. Although the fossil fuel industry continues to out perform the renewable energy industry, it is still the renewables that provide people with more jobs. And these people need energy to function in modern society. And they could get their energy from your company. As more people are becoming concerned about climate change, they are more likely to switch to green energy tariffs. In February of this year Jim Cramer announced "There is no more money to be made in oil and gas stocks". More than half of the ecomony depends on nature and, for obvious reasons we cannot continue using nature under a sick planet. If these people lose their jobs, they won't be available to buy from the fossil fuel company. I will close with a quote from Sir David Attenborough " Sources: Extinction: The Facts ASAP Science The Telegraph Jim Cramer
