Objection

This is the site that caused such heavy and angry opposition last time it was tested and used. This opposition will only be louder and angrier if used again. We don't need to drill for oil in our beautiful countryside, and we don't need to take fossil fuels from the ground, we have the science, we have the technology and we have the ability to make energy in other ways. In case you were not aware, we are in the midst of a climate emergency, an emergency that could be avoided if we put our efforts and abilities to work in order to keep fossil fuels in the ground. Earlier in this objection, when I mentioned the opposition to this site being used, I didnt touch on the possibility of Extinction Rebellion being involved. Of course last time Lower Stumble was used, Extinction Rebellion didn't exist, but now, tbey could cause you some real problems when it comes to this site, so please keep this in mind. Again, I urge you not to return to Lower Stumble, and please put your energy and efforts into alternative methods of energy creation or fueling systems. Our fossil fuels must remain in the ground and not floating around in the atmosphere.
