Comment for planning application WSCC/045/20	
Application number	WSCC/045/20
Name	Sally Owens
Address	HURST ROAD, 8, HURST ROAD, HASSOCKS, BN6 9NJ
Type of Comment	Objection
Comments	I am objecting to this application because, at this very dangerous and crucial point in our history, the last thing we should be doing is considering new areas for oil and gas extraction anywhere, let alone an AONB. The additional atmospheric CO2 which would be produced would lead to an increase in global warming at a time when WSCC have declared a climate emergency and when we should be doing everything in our power to explore and encourage new and sustainable ways to provide energy. Allowing this application would involve a risk of pollution of the local reservoir, which provides drinking water for a large part of the county as well as a risk to the local air quality caused by the ' flaring process'. It seems ridiculous that when Covid 19 is on the increase and people's respiratory systems are already under so much pressure from other forms of pollution, that we should even consider this application. Please reject it. It is short sighted, reckless and dangerous.
