Comments	<input type="text" value="This application does not mitigate the concerns and risks expressed previously about this site: The site is clearly not appropriate for this purpose. The geology of the site does not permit safe testing or production. The location of the site has been proved to be unsuitable for flaring or venting hydrocarbons. The state of the well itself and the difficulty and delay experienced in previous tests suggests that this hydrocarbon well will not be economically viable and therefore of no use to the local or national economy. Thank you for the opportunity to comment on this application"/>
