Comment for planning application WSCC/045/20

Application number	WSCC/045/20
Name	Chris Taylor
Address	GERRARDS, HILL HOUSE HILL, HILL HOUSE HILL, LIPHOOK, GU30 7PX
Type of Comment	Objection
Comments	I object. WSCC - you have a duty to your citizens to finally kick this ridiculous abomination out. Significant Increase in HGVs close to the school and on London Road. Many of the HGVs are 6-axle vehicles that take up the entire length of the school as they wait to go down London Road. They cross both sides of the road as they turn into the site, and many are so tall they risk hitting the low slung power lines Flaring: Angus will have a flare on site for a year. The site is below the village and the prevailing wind will blow pollutants straight towards residents Risk to water and geology: An independent hydrology report found that the oil well was not sound in all sections which 'increases the risk to groundwater quality'. Commenting on Angus energy's risk assessment they stated 'understanding of risk to groundwater systems () is wholly inadequate' (Tapajos Hydrology report 2019) Seismic risk: Oil developments in the Weald and elsewhere have been associated with and proved to cause earthquakes Not temporary: Each time an oil company works here it sets a precedent for more work to follow. They are flow-testing for oil and will be producing oil in the hope they can apply for further production. This will set a further precedent for oil production across the Weald Climate Change: If WSCC allow this they are certainly not 'doing their bit' to try and prevent the climate crisis.
