The existing buildings at Woodlands Meed are in a poor condition and are in desperate need of replacement. It is considered that the principle of a significant new investment in replacing these worn out buildings and to meet statutory requirements is to be welcomed. It is considered that the proposal to build the new buildings to the south of the site to enable the existing school to continue to operate during the construction phase is a sensible and pragmatic response to this issue. It is considered that the design and location of the new buildings is acceptable. Their carefully designed low profile means that they will not be overly dominant in the area. The new buildings can be designed so that they are more environmentally sound than the structures they are replacing. It is not considered that their location will have an adverse impact on the amenities of the properties that surround the site. It is also considered that the proposed location of the games court and new sports pitch to meet statutory requirements is also acceptable. There is no increase in pupil numbers it is considered that the level of car parking and access will be satisfactory. It is requested that this proposal be approved.
