---

With regard to the submission of this amended application for an Energy Recovery Facility/Waste Sorting/Transfer Facility for treatment of municipal, commercial and industry wastes at Ford – I still object to this application on the basis that I think this location entirely wrong for such a facility in that it is in a residential location where there is a planned significant increase in housing at Ford, all of which will be impacted by the dust, odour and fumes of incineration, as will the adjacent villages of Barnham, Yapton and Walberton.

In my opinion such a facility should be in a rural site at an acceptable distance away from residential dwellings.
