

Comment for planning application WSCC/011/21

Application number	<input type="text" value="WSCC/011/21"/>
Name	<input type="text" value="Alison Ireland"/>
Address	<input type="text" value="MIDDLETON ROAD, 105, MIDDLETON ROAD, BOGNOR REGIS, PO22 6DW"/>
Type of Comment	<input type="text" value="Objection"/>
Comments	<p>BURNING PLASTICS RELEASES TOXINS! Who will come to our district to visit, holiday or even live if they are concerned about noxious hazardous emissions? It does not make any difference to the height of the chimney or chimneys this is not good for the environment, people wildlife etc on any level. We can do better than this! To reduce our carbon footprint we need to come up with better and long term solutions not knee jerk ones that actually will cause even more damage. We need honesty and integrity, we need real solutions to our planets flight. Where are these? Certainly not this. Not only is there going to be vast numbers of heavy goods vehicles on roads that are already extremely congested, the noise, the pollution, the impact of the noxious fumes and smells are not fully understood. The proximity to residential areas and those within miles of the facility depending on prevailing winds. The visual impact is massive too, so they have brought the height down and made 2 chimneys instead of one to the height of chichester cathedral? Is that an improvement on the last application?? Really? The area would be known detrimentally for an appalling landmark of this structure, all of the beautiful sites in the district would pale into insignificance. People will stop coming to this area and will go elsewhere! Its not just an environmentally catastrophic mistake but also commercially, this could cause a serious impact within the district. This facility should not even be considered as it is, its the wrong process for dealing with waste and its certainly in the wrong place. The other comment I would like to raise, is why we have to write our objections twice when an application has been slightly amended? Especially for an application of this magnitude. The objections for the previous application are all still valid and basically the same and have not been addressed or dealt with? I hope we make the right decision for the area in which we live and say a resounding NO.</p>
