| Type of Comment | Objection |
| Comments | I strongly object to the proposed energy recovery facility as outlined in the above application. The use of an incinerator at this site would have a detrimental effect on the environment in terms of the release of harmful emissions that impact on air quality and contribute to Climate Change. The local roads will be impacted by more hgv traffic which is already a big problem on Ford Road leading to more congestion and hold ups. The size of the facility will make a negative impression on the landscape and be visible for miles and affect the natural beauty of Arundel and the South Downs National Park. I believe that an improved recycling plant would be far more beneficial. If recycling was made simpler it would encourage more people to recycle. A programme of local talks providing information on the process of recycling would make residents more engaged with the process could have a positive outcome. The proposed facility is a negative not a positive solution to waste disposal and should not go |
