Objection

I object to this application for the following reasons: ROADS: an additional 250 HGV movements along Ford Road is not compatible with current road traffic conditions, particularly at busy times, and will gridlock the approach roads to Arundel. CAPACITY NOT NEEDED: there is already sufficient capacity for incineration in West Sussex to meet its needs, and there is no need to build capacity to meet the needs of other regions; they can build their own incinerators. INCINERATOR INCOMPATIBLE WITH LOCAL HOUSING PLANS: this proposal is incompatible with ADC's key strategic sites for a new settlement for 1,500 houses and a primary and secondary school with village centre, which was supported by a local referendum. NOT GREEN ENERGY: energy generated by incinerators does not meet the Government stated aims on CO2 reduction and clean air. Emission stacks from incinerators are not quaranteed to remove dioxins, NOx and ultrafine particulates that are harmful to residents and the environment. VISUAL IMPACT: a building of this size, 13 storey high and visible from as far away as Chichester, with two 28 storey stacks, is abhorrent and totally unacceptable. It will affect the South Downs National Park, Schedule Ancient Monuments, Sites of Special Scientific Interest and Grade 1 and Grade 2 listed buildings, such as the one we live in.
