I want to object in the strongest possible terms to this application. I have tried to do so on line but your link appears to have failed.

Do the authorities never learn ? How much research and information must be available as to the urgent declining situation with our planet and in particular the necessity to cut toxic emissions immediately and yet here is planned a massive incinerator going against everything that we as a population need to be doing.

We are encouraged to split up our waste and recycle and each householder will be doing their bit to aid in this delegation, yet I see a documentary showing how much of the recycled waste goes to incineration ....please wake up !!!

Divert the budget for this monstrosity and all the negative impacts of it...air pollution, visual, huge transport increases to and from on unmaintained highways....I could go on....and put it towards the circular economy which will reduce any need for incineration and improve the delicate balance between sustaining the area we live in wrecking it further.

PLEASE rethink this madness it has nothing but negative impact when we have sufficient incineration capability and move forwards to the future with non detrimental solutions which do exist.
