Hi,

I am objecting once again to the Grundon/Viridor proposed FORD ENERGY FROM WASTE site. I do not think there have been any positive changes at all.

Two chimney stacks as high as Chichester Cathedral! Massive building for the area. 275,000 tonnes a year of mixed waste to be burnt there.

This is not suitable for the area, There will be dust fumes and smell which will have an impact of trees and hedgerows. This is also a very built up area where more houses are to be built completely opposite on the Ford Airfield, I moved here to enjoy my retirement especially in the garden which due to the SMELL from the emissions and the NOISE it will create which will become much worse. I am concerned also for the children and older people and the risk of cancer happening to them and all who live nearby.

I am very close to this area where it is due to be built and it is very frightening that I will not feel safe to sit in my garden or to have my windows open.

This will also generate so much more traffic of heavy lorries and the safety of the highway. Again the risk of the fumes causing cancer and other such like problems, also accident and traffic hold-ups.

My name is Dee Heppenstall
4 Junction Close,
Ford,
Arundel
BN18 0TE

Yours sincerely,
Dee Heppenstall
