Comment for planning application WSCC/011/21	
Application number	WSCC/011/21
Name	Dr Andrew Hancock
Address	flat 2 50 Tarrant street. Arundel
Type of Comment	Objection
Comments	Obviously I object. The fingerprint of chemicals and concentration from the combustion of tobacco is complex enough and is unique to each type of tobacco. You are talking about incinerating what exactly? Its going to be off the scale in terms of the environmental impact from the wide range of polutants created by the process. It will take years of research to develop and validate fit for purpose accurate and precise sample extraction and cleanup methods for chromatographic analysis in oder to put in place a continual in line monitoring facility to ensure the levels of each and every risk assessed harmful chemical fall below ppm ppb exposure levels of industry safety requirements. These levels would need to be monitored in the surrounding areas also. As a doctor in environmental chemical analysis. I won't say I'm surprised because just follow the money. Do you know if these guys have any GC MS / SPME data regarding BTEX collective or PM10s or polyaromatic hydrocarbons or polychlorinated benzenes etc just for starters. Object.
