Objection

I think most people will have stated all the relevant reasons why this application for an incinerator should not be built. Firstly and foremost there is actually no need for one as the proposal for a waste disposal unit has already been passed on this site and meets the requirements of the amount of waste in West Sussex that we have to dispose of. The incinerator will mean we will be disposing of waste coming from all over the country down to our little costal rural area on our completely unsuitable little country roads. A similar plant is actually being started in Horsham a much more central and suitable location by far. We have a 5 year housing supply to meet and this incinerator could be really detrimental to that supply as 1,500 homes are being considered on the Ford airfield aswell and the 2 applications do not go hand in hand. We have the matter of toxic emissions into our air that it will produce and it WILL produce waste products however much anyone reassures us that they will be filtered. It is also damaging to our climate emergency and the need to recycle and reuse as an incinerator encourages communities to throw things away as statistics have proven. Not to mention the blot on the landscape it will create for many miles around. The proposers of this monster have said they have gone away and considered the views of the public and have returned with this slightly modified proposal. If they had listen to the voice of the public at all they would have actually removed the application completely!!! Amanda Worne District Councillor for Yapton, Ford and Clymping.
