Comments	<p>I wish to object in the strongest possible terms to the proposal for an Incinerator on the Ford Airfield site for the following reasons. Firstly, this will be completely detrimental visually, to the local landscape. We are lucky enough to live on the edge of The South Downs National Park, which is a beautiful area. An Incinerator has absolutely NO place whatsoever in this area, especially when the proposed chimney stack is going to be higher than Chichester Cathedral!!. It will be a Carbuncle on the local landscape & must not be allowed to go ahead!. Secondly, the local roads are already choked with traffic, with frequent traffic jams & tailbacks. There are many new housing sites in the area, 4 in Yapton alone, which means that soon there will be even more traffic on local roads that are already struggling to cope. The thought of continuous HGV lorries bringing the waste from goodness knows where, to the Incinerator is just madness. The roads will NOT cope!. Thirdly, Incinerators have been found to produce many toxic gasses & have been linked to causing Cancer to people living in close proximity. With many local towns & villages around the proposed site, is this really a good idea?. Definitely not!!. My next point is that we should be increasing our recycling capabilities, to deal with our waste, in line with Government guidelines. Why are Arun & West Sussex Councils not doing this?. Recycling is the way forward, not burning waste that has been driven hundreds of miles from who knows where?!. This cannot be allowed to happen!!. My final point is that if there has to be an Incinerator in West Sussex, that it should be on the Horsham site, which has much better road links & less traffic congestion than this area. However, as previously stated, the whole Incinerator idea needs re-thinking!. It is NOT a good idea & should be avoided at all costs!.</p>
