---

For the attn of Mr J Neave

Dear Sir

I am writing to oppose the application for the above waste plant and buildings which include an enormously tall incinerator chimney in the Ford area.

This development would affect the whole area and the community, particularly as more homes will be built in the area. I object on the following grounds:

- there would be more fumes and odours affecting people, buildings, (including the prison), animals and the adjacent countryside.
- the development with the incredibly high chimney would destroy the residential area.
- the noise level would increase greatly, not only from the site but also traffic.
- there would be significant impact on the natural environment
- it would generate far more traffic and fumes, particularly the volume of lorries, and therefore this would cause a highway safety hazard.
- why develop such a scheme in a residential area?

Please consider these points before granting any planning application which would have a tremendous detrimental affect on the area and the people living there.

Yours faithfully

P A Barber
