Subject: WSCC/011/21 - Ford Incinerator Application
Date: 18 May 2021 11:04:19

It is appreciated that this objection may be out of time but hopefully can be included.

Grounds of Objection

1. The installation of this incinerator will lead to a further deterioration in the battle in respect of improvement in climate change
2. The location of the plant at the southerly edge of Sussex is misguided and will lead to a vast increase in traffic transporting refuse from around Sussex to the south western corner of the area adding considerably to pollution and traffic incidents.
3. The proposed site of the very tall plant will severely interfere with one of the most outstanding uninterrupted views from the South Downs National Park to the English Channel.
4. It is a speculative application by Grundon who have a further 90+ applications around the country on the basis that a small minority will be successful but be sufficient to satisfy the company's business plans where location is immaterial.
