Subject: waste recovery proposal

Dear James

Below is a copy of the submission added to the objections for planning WSCC/011/21
I would also like to add that myself and a number of residents have had issues already with the existing Viridor plant with the noise at early hrs of the morning. Mainly from the beep beeb reversing noise that lorries and plant machinery make.
Also we have been having issues with 'South coast skips' who process all sorts of waste with unpleasant odours emitting from it . Environment agency are on the case with this but as yet there hasn't been a satisfactory conclusion .
To add further waste processing facilities within this locality is total madness and I do hope that you and your colleagues reject this planning proposal.

Yours sincerely
Paul Caldecott

I cannot understand why this totally unacceptable planning application is even being considered by WSCC.
With the proposed housing developments springing up around this area with hundreds of domestic dwellings we CANNOT let this major score of road and air pollution go ahead .
Despite what this company might claim , there WILL be noise and air pollution from this so called "energy recovery facility" which will detract from hundreds of people in this beautiful part of the country .
On top of this the chimney and building would be nothing more than "Rural Vandalism " and would be seen for miles away.
I strongly urge WSCC to reject this application unless it wishes to lose all respect and credibility amongst its local community .
