Comments	<p>The dramatic removal of forest in this location will have a severe negative effect on the local water table and make Loxwood susceptible to flash floods. With recent changes in the climate it is essential that we do everything we can to stop water quickly hitting drainage channels and this plan would do the exact opposite.</p> <p>As the area is clay the runoff would be dramatic and instant, and in high rainfall periods leave create a significant problem.</p> <p>In the plans for this application the thought to this has been woeful and the effect on local residents due to this has not been analysed.</p>
