Comments	<p>Excessive HGV traffic will be seen in the area. Why is this waste site on a Greenfield site. National policy states that waste sites should be sited in built up areas so why is this planned in Pallinghurst woods?</p> <p>Site access for HGV's will run along and across established public right of way routes regularly used by member of the public. This will bring severe safety and health concerns. A footpath 792-1 will close with significant diversion for users and will be closed for 33 years. This area planned for this money making operation will ruin the tranquil area bringing pollution which will include dust, diesel and noise. The increased HGV traffic will have severe impact on the local villages with an increase in HGV traffic of up to 300%.</p> <p>We have recently moved into the Rudgwick area and are very disappointed that this plan is even being looked at.</p> <p>The Environment of the area is why we moved here. The development will result in an increase in net carbon emissions from the burning of fossil fuels and will have a major impact on local wildlife and habitat with felling of the woodland. WSCC need to look at this and stop this planning application in its tracks.</p> <p>The lay-by and movement of the HGV's will bring further disruption not only with the loss of public parking, but also the noise ,dust and light pollution. from the wheel washing process etc.</p>
