Name	<input type="text" value="Matthew Barnett"/>
Address	<input type="text" value="FOXHOLES, 25, FOXHOLES, HORSHAM, RH12 3DX"/>
Type of Comment	<input type="text" value="Objection"/>
Comments	<p>The proposal for the Loxwood Clay Pits is insensitive and damaging to the local area, wildlife and residents. Loxwood and the surrounding area is beautiful with a wide variety of footpaths, bridleways and a canal. By creating a waste facility in the middle of woodland with access being provided through ancient woodland seems incredibly narrow minded. Residents and members of the public who use these routes will have their privacy and views impacted by such a facility. This area of beauty would certainly not benefit from excess fumes, dust and odors that a waste facility would undoubtedly create. It is essential that both new and ancient woodland is preserved for environmental reasons and with global warming now at critical condition we must give our planet the best chance to recover; a waste facility which requires trees to be felled does not support this.</p> <p>As a member of the local community (living in Rudgwick) with a young family I am genuinely scared when I walk down the A281 as the traffic is ever increasing and the trucks pass very close by to the curb due to the narrow layout of the road. The foundations of the houses in Bucks Green physically shake when fully loaded trucks pass by and this is unsafe for pedestrians and residents. The current noise and disturbance levels are impacting negatively on all those involved and again we should be looking at reducing these, not adding to an already serious local community issue.</p> <p>In summary, the development of a waste facility such as this would be highly detrimental to the local community, wildlife and would severely impact the integrity and character of the area in all the ways mentioned above.</p>
