Objection

- 1. The location of this proposed clay pit and waste construction materials recycling facility in peaceful wooded countryside some 1.3km from the nearest public road seems inappropriate. The noise from the lorry traffic travelling through the woodland and from the plant operations at the pit and the 8.5 metre high waste processing building, together with obtrusive lighting at the works during shorter winter days, will have a marked impact on the existing environment.
- 2. The proposed access route to/from the A281 is a minor country road which is already hazardous for existing traffic due to its limited width, restricted sightlines in places and poor state of repair in parts. Significant additional HGV traffic would further damage the condition of the road and affect the safety of other road users.

Consideration must be given to (a) restricting the speed of all HGVs using this road and (b) requiring the clay pit owner to make a realistic on-going contribution towards the road's future maintenance.
