Sadly UKOG has proved themselves to not be trusted. We in the local community do not welcome them back. They lied about some of our residents, said they would clean up the site which they have not, when the well collapsed no information was given to us and now they are talking about a totally different industry. Applying for geothermal and tea production? Really or is this just another way to continue oil and gas drilling in a time when it is just not appropriate?. After the difficult years the community experienced having UKOG working here they are not welcome back.

They in no way benefitted us locally and if they had gone on to produce oil and gas that would have further contributed to the climate and ecological breakdown we are facing. Our roads were affected from their heavy vehicles and they brought discontent within our village.

If in deed they are interested in geothermal they must first close up the well and ensure a thorough restoration before applying for a different application.
