## Comment for planning application WSCC/046/23

Application number	WSCC/046/23	
Name	Susan chapman	
Address	55 parkwood rd, Southbourne, bournemouth Southbourne	
Type of Comment	Objection	
Comments	Atmospheric greenhouse gas levels are up to an astonishing 424 parts er million CO2. And still increasing. A safer level for us all- before triggering irreversible changes- might be 350 ppm CO2. The world knows it must transition away from dangerous fossil fuels that have cruelly pretended innocence for decades. The Clim ate Change committee, the IEA, global scientists & our dear #Fridays4Future youngsters all know the writing's on the wall. Hydrocarbon production is NOT sustainable and runs counter to the NPPF. Risking earthquakes, acid contamination & the long-term problems of abandoned oil wells betrays the same psychopathic Holocenic mindset whch fails to decarbonise at speed and scale to avoid further loss and damage on our compromised home planet. Contempt for safeguarding - and the same criminal mind-set failures that have led to the Horizon post office scandal - seems to be the fashion when we could all transition much quicker to safer forms of clean energy. Decarbonisation at speed and scale is demanded by the science but our infant species seems to think it will get away with cretinous stupidity and failure to respect planetary boundaries and the infinitely precious biosphere that gives us all life. We do not have the right to genocidely inflict increasing damage on our brothers and sisters in island nations now vanishing. BCP's climate guru has warned us all (October 2022) that Earth's stability is no more, that "global ecological collapse is imminent" and that there's "no guarantee of a future at all". VERY UNCOMFORTING for the next generation who can see what's coming and are not impressed.
